What are the regional sales in the best performing country?

SQL Query:

SELECT TerritoryID, Name, CountryRegionCode, SalesLastYear

FROM Sales.SalesTerritory

Ideas and conceptual sketches

The dataset provided sales figures for six countries, and within the USA, for five regions. The table Sales.SalesTerritory provided the necessary data to answer the question; no joining of tables was required.

'Sales Last Year' was used for 'sales' to ensure that there was a complete year of data to compare countries and regions against, rather than also including 'Sales YTD' (Sales Year to Date).

The analysis was carried out in Visual Studio Code:

- Firstly, sales were grouped by country using Pandas in python in order to find out which was the best performing country.
- Secondly, the US regions and sales were selected using Pandas in python, and plotted using matplotlib to visualise the regional sales in the best performing country.

Assumptions:

- The database AdventureWorks defines 'Sales Last Year' as a monetary value. It does not define the currency. It has been assumed that 'Sales Last Year' data is in a consistent currency (e.g. US dollars) rather than a mix of currencies relating to each country's currency.

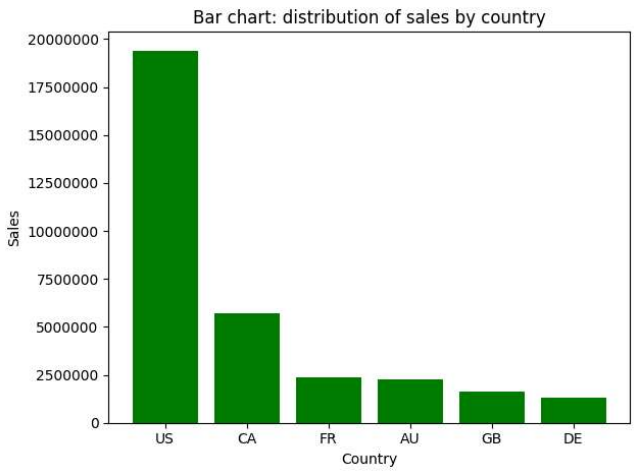
Limitations:

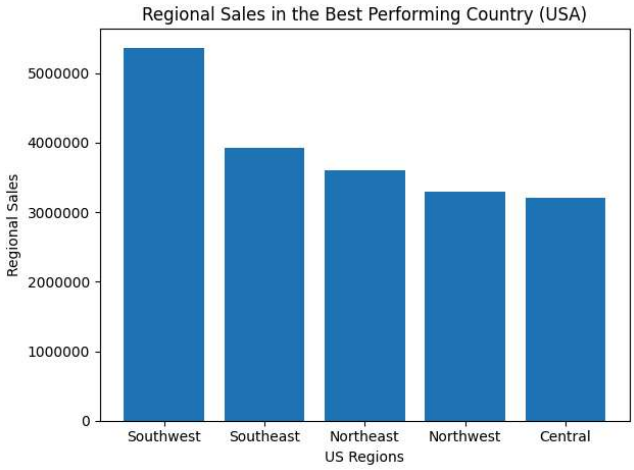
- It is not known what year 'Sales Last Year' refers to. Knowing this would provide context to the data analysis and more valuable insights.

Analysis:

- The strongest performing country was the USA by a large margin, with total sales of 19.4 million.
- Canada is the second highest with sales of 5.7 million.
- The other four countries have significantly lower sales, all below 2.5 million.
- The bar chart shows that the distribution is very skewed, heavily favouring the USA.
- The north American market (USA and Canada) clearly dominates the sales in the company. European and Australian markets are much smaller; there could be growth opportunities here.

Rank	Country	Regional Sales
1	United States (US)	19,402,504
2	Canada (CA)	5,693,988
3	France (FR)	2,396,539
4	Australia (Au)	2,278,548
5	United Kingdom (GB)	1,635,823
6	Germany (DE)	1,307,949



- Within the USA, the Southwest was the best performing region with sales of 5.4 million, outperforming all other regions.
- The other four regions had more similar sales data , within the 3 million range.
- The bar chart shows the spread of the regional sales data, with a clear leader (Southwest), and a relatively gradual decline in sales amongst the bottom four regions.
- There could be opportunities for growth by targeting resources in the north and central areas.


Rank	US Region	Regional Sales
1	Southwest	5,366,575
2	Southeast	3,925,071
3	Northeast	3,607,148
4	Northwest	3,298,694
5	Central	3,205,014
